how to
SAVE MONEY
on your heating costs

The Nevada Power Company brings you all the electric power you need, still at one of the lowest residential rates in the nation... but that's no reason to waste it. These simple tips will help you save money on heating costs and, at the same time, help conserve our vital resources, which are not unlimited.

- Make sure you have the right size unit. If it is too small, it will run almost constantly and still not do a complete job. If it is too large, money is invested needlessly and the unit will not do a good job of controlling humidity.
- Set thermostat at best level for comfort and economy. During heating season, for every degree the thermostat is set below 72 degrees, the heating bill should be reduced about 5 per cent.
- Avoid changing the thermostat from one setting to another. The system will automatically maintain the desired comfort level.
- Change filters at least once a month, preferably every two weeks.
- Encourage children to close doors when they enter or leave the house.
- If you have large expanses of glass, like picture windows or sliding glass doors, close drapes

or curtains over them in the evening to prevent heat loss.

- Use the unit's fan continuously by setting the control switch to the "ON" position. By letting the fan run constantly, air in your home will be circulated and will eliminate hot or cold pockets. It will also provide more air filtration.

- When cooking, turn on kitchen ventilation fan.

- When using the tub or shower, keep bathroom doors closed and ventilator on. If there is no vent fan, open the window a crack. This helps exhaust excess humidity to the outside.

- Try to achieve good insulation. A full insulated home will normally require from 20 to 40 per cent less energy than a home that is insulated to minimum standards.

- Above all, consult the manufacturer's manual for the proper use and maintenance of your air conditioning unit.
