

UNIVERSITIES SUSPEND AID TO ARABS

NEW YORK (WNS) -- A consortium of five Midwestern state universities has suspended participation in an evaluation program for the University of Riyadh in Saudi Arabia following the refusal of the Saudi Government to grant a visa to a Jewish professor.

NEW YORK - DR. MAX M. KAMPELMAN, WASHINGTON, D. C. ATTORNEY AND COMMUNITY LEADER, HAS BEEN ELECTED PRESIDENT OF THE AMERICAN FRIENDS OF THE HEBREW UNIVERSITY.

university's programs in agriculture, education, engineering, medicine and other subjects. It acted to end the agreement after the Saudi government refused to grant a visa to a Jew, Dr. Ralph Smukler, dean of international programs at Michigan State. Phil Baum,

the AJCongress' associate executive director, said the act was "an eloquent demonstration that the importation of foreign religious prejudices to our shores is rejected."

Baum called upon Secretary of the Treasury William B. Simon and Secretary of Commerce Frederick Dent "to adopt a comparable public stand" to ensure that all projects by the American government in Saudi Arabia "will be free from both the fact and the threat of religious discrimination."

Where your Electric Power comes from

Electricity for our area comes from seven different generating stations located in Clark County; Page, Arizona; and Hoover Dam. Some of it is generated by coal (60%); some by gas and oil (30%); and some of it by hydropower (5%). The balance (5%) is purchased during peak summer periods. Many area people are under the misconception that the bulk of our power comes from the Dam. (We wish it did because this is low cost energy.) But these figures show that Hoover accounts for only 1/20th of our capacity.

Most of the electricity you use comes from the more than one million tons of coal and 500 thousand barrels of oil we burn each year to produce it. When it comes out of Page (the Navajo Station), it is carried over a 250-mile, 500 KVA transmission line. Nevada Power maintains this line and its 1,035 massive steel towers with regular foot and aerial inspections.

Regardless of its source, the price of electricity has been climbing, just as the price of all energy has. The one sure way you can keep your power bill down is to use less electricity. You can do this, with hardly any inconvenience, by eliminating waste. We've just completed a new booklet that has scores of no-nonsense tips on how to do this. You can get your copy by writing: "Booklet," Nevada Power Company, Box 230, Las Vegas 89151. Or pick one up at any of our offices. Or phone 385-5811.

If you'd like to get a group of friends and neighbors together (perhaps a civic or social organization you belong to) we'll be glad to have one of our energy conservation specialists address the gathering and answer any questions. Drop us a note, or call 385-5753.

Meanwhile, please make conservation a habit. Electricity costs too much to waste any longer.
