HAVE YOU EVER ACTUALLY SEEN A SECOND?

The Seiko Quartz gives you accuracy you can see because the second hand moves in precise one-second intervals. Conventional watches with sweep-second hands simply can't show the movement of time as accurately. Quartz watches are at least four times more accurate than any other type of wristwatch. The Seiko Quartz is accurate not just within seconds per day or per week, but within seconds per month. Shown: Seiko Quartz No. CM002M—\$225. Other Seiko Quartz models are priced from \$150 to \$575.
