

NEVADA POWER'S HEAT PUMP PROGRAM FEATURES EASY FINANCING AND FULL 5-YEAR WARRANTY

Nevada Power offers a 5-point program that makes it easy for homeowners to replace old heating and cooling systems with the high efficiency heat pump. The new generation of heat pumps can cut heating and cooling costs up to 40 percent — which means they can pay for themselves in 4 to 7 years.

Here's the 5-point program:

1. Nevada Power will conduct a free computerized survey of your home and will show how it will pay you to install a new heat pump.
2. Nevada Power will provide a list of certified contractors and heat pump manufacturers for you to select from, and arrange installation.
3. Nevada Power offers low interest financing with no money down and up to five years to pay.
4. Nevada Power will give you a five-year warranty on all parts and labor.
5. And, finally, Nevada Power guarantees satisfaction with the quality of equipment and work performed.

The high efficiency heat pump saves energy because it uses existing heat. In the winter it moves heat found outside to inside your home. In the summer the process is reversed.

Take advantage of this special program and move up to the most modern and efficient space conditioning system on the market.
