Nevada Corporation

CAPITAL - - - \$200,000  
2,000,000 Shares Par Value TEN CENTS  
Stock is NON-ASSESSABLE

Office at the Mine in Eldorado Canyon, where Stock is Issued  
Post Office Address is Box 591, Las Vegas, Nevada

Orders for stock may be left with Mr. C. E. L. Gresh at the Apache  
Hotel, Las Vegas, Nevada

now nearly completed which will be milled until our own mill is completed.

About \$200,000 has been expended in the purchase and development of the mine. A little more capital is needed to develop seven new points (any of which may be rich strikes and enhance the value) and complete our own mill. We have ample water for milling.

## RECENT RESULTS

Our last work, just completed, has exposed an east-west vein which was suspected under the gravel in the main way. After opening this vein and exposing thousands of feet of ore from \$5 to \$28 in gold we have found a vein about 60 feet east and west of a streak of \$330 gold ore through the main ore body. Here we will start again. HERE WE START again. start with us, if you are willing.

Our ore varies in value from \$10 to \$100 per ton. The values are not uniform. The ounces of silver to one ounce of gold average mill value depends on the grade of ore we mix with the low grade. The best ore we can average \$12 per ton as it comes.

The ore is amenable to Cyanide treatment. We have tested 500 tons of ore with Flotation mill tests on 500 tons or more. We are deciding which treatment to use in our mill.

Here is a DEVELOPED MINE with UNLIMITED POSSIBILITIES as great as you have ever had. This is all we have to offer. If you do not buy now, you will lose no time by BUYING.

Main North-South ore-filled fracture along Major Fault that cuts across Eldorado Canyon and which may be the Mother Lode of all the East-West veins shown on first sketch. A fifty-foot drift now to be driven will open all veins at the 400-foot inclined level where rich strikes are possible.

The Eldorado Empire patented GOLD MINE is located in the center of Eldorado Canyon on the great MAJOR FAULT that cuts the Canyon in two and must extend to a great depth. The Mine is fifteen miles south of Boulder Dam, from which a power line is now under construction, and one mile west of a 300-ton custom mill
