What Is It?

OGDEN, Iowa—Special CFI Photo to The Age from Carl Saxauer — Is this a Mastodon Tooth of the pre-historic age asked Editor Carl Saxauer of the Ogden Reporter in his paper recently, when he published a picture of the giant tooth, which was uncovered in a strata of gravel some 40 to 50 feet down in the new pit near here. If it isn't a Mastodon Tooth, what is it, asks this Iowa publisher? The fact that several bins of gravel were rejected by inspectors due to the large amount of crushed bone mixed with the newly processed gravel, would indicate that the entire skeleton or a large portion of the giant animal, which at one time roamed in this area before the great Glacier, went through the crusher and was demolished.
