### EYES DOWNWARD

Sondra Reid

More than ever, focus is placed on footwear. We women of the space age are indeed fortunate in having such a wide variety of footwear to choose from, in style, color, texture and price. The latter, price, should be a secondary consideration when deciding to make a purchase.

Our first thought should be that of getting a proper fit. So many women today suffer daily from wearing shoes that are either a half size too small or too large, too narrow, or heels too high, that causes muscles of the leg to pain.

Keep these pointers in mind when buying shoes:  
1. Proper size and fit. Have the salesperson measure your foot. Do not just tell them the size you have been wearing. Size may differ with style and make of the shoe.

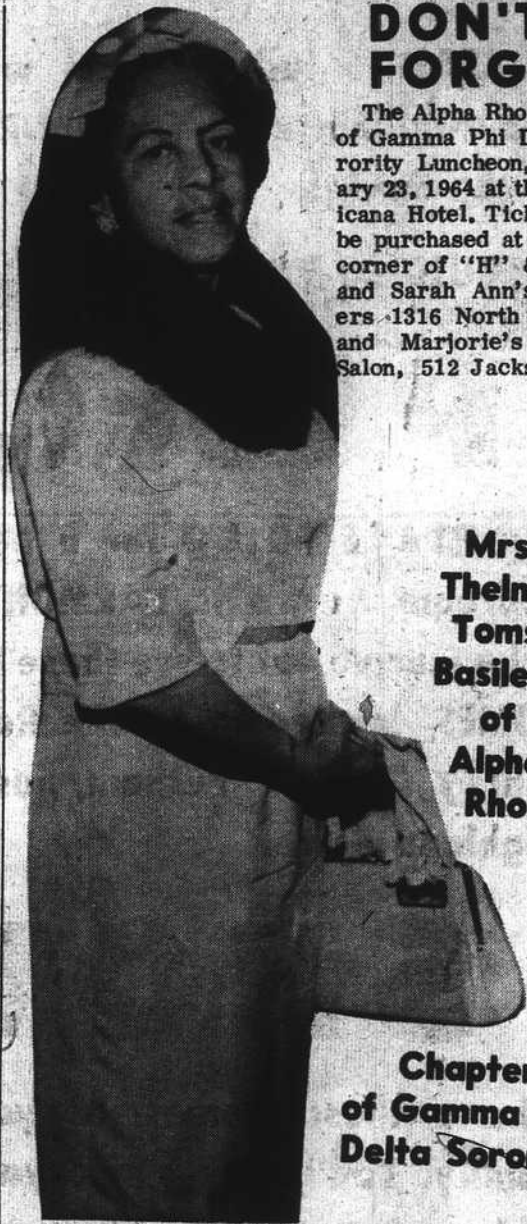

2. Select shoe style for the occasion for which they will be worn. High fashion styles such as gold, sequine, brocade, satin, silk, jeweled and glitter shoes are to be worn only with after five fashions, such as cocktail parties, late dinner
