

WEATHERPROOF

Call off the heat this summer!

Call 737-1013

Save now on a Year-Round Air Conditioning/Heating System.

Now you can literally weatherproof your entire home with full-house air conditioning and gas heating — combined in one compact unit. It's the one system that gives you refrigerated cooling during the summer and economical gas heating in the winter. You have finger tip control of the exact temperature you desire.

This new type of combination air conditioning and heating unit delivers far more comfort to every room in your home. It's economical. Quiet. And since it has fewer moving parts, there's less wear. You get trouble-free operation for many, many years to come. Moreover, its compressor only works during refrigerated cooling in the summer, not for gas heating. This means a double, longer life. Thousands of installations right here in Las Vegas have proved it!

So why swelter through the heat this year? Avoid the summer rush. Act now. Weatherproof your house with clean, circulating air. Call 737-1013 for Free Estimate.

- Lowest prices of the year with the easiest terms.
- Small monthly payments on your gas bill.
- Immediate installation by bonded authorized dealers.
- 5-year warranty on all parts and labor — absolutely no repair bills for a full 5 years.

Natural Gas Racer Out To Break Mark

This car is a gas. It runs on gas, that is, just like the stuff the little woman cooks your dinner with, unless she or her kitchen is electrified.

The rocket-engine racer, "The Blue Flame," will attempt to break the present world land speed record of 600.601 m.p.h. in late August or September at the Bonneville Salt Flats in Utah. Fuel for the gas industry's racer is liquefied natural gas.

Liquefying natural gas to a temperature of 258 degrees below zero reduces its volume by a 600 to 1 ratio and the process permits storage of large quantities in compact spaces. Thus a tremendous amount of high-powered energy can be stored in a small space.

In the rocket engine of "The Blue Flame," natural gas will be oxidized by hydrogen peroxide in the burning process and the resultant thrust will presumably propel the vehicle across the salt flats at speeds unheard of for a land car. Wind-tunnel tests indicated that its pencil-shaped design would permit the vehicle to travel at more than 900 m.p.h.

Gary Gabelich, a 29-year-old former test astronaut, will drive the racer in his attempt to become the fastest man on earth. Gabelich said his ten years experience with North American Rockwell convinced him that only a rocket-engine vehicle could break the record set five years ago by Craig Breedlove's jet-engine racer.

"The rocket, fueled with a cryogenic fuel such as liquefied natural gas, is just about the purest form of energy available," he said.

The 38-foot aluminum rocket car is designed to deliver 22,000 lbs. of maximum thrust. It will be modified for this year's run to provide 13,000 lbs. of thrust. "The Blue Flame" must travel at 606.607 m.p.h. or more to break Breedlove's 1965 record by the one percent or more required by La Federation Internationale L'Automobile.

The natural gas industry is sponsoring "The Blue Flame" to dramatize the versatility and potential of liquefied natural gas, according to John B. DuBoise, public relations director for Southwest Gas Corporation. LNG is currently under study as a potential fuel for supersonic aircraft and as an alternative to gasoline in automobiles because of its clean burning, smog-free combustion.

DuBoise said this year's attempt to set a new land speed record is just the beginning. Next year the industry hopes to break the sound barrier and the year after that perhaps 1,000 m.p.h.
