Timely Safety Tips

Avoid Fall Chills With A Furnace Check Now

When the cool days and even cooler nights of autumn arrive, the rush is normally to turn on the furnace and make the house comfy, cozy once more. But rushing to turn on a furnace that hasn't been properly serviced or inspected could make things hot for you sooner than you expect.

Underwriters Laboratories Inc. (UL), a not-for-profit organization which has tested products for public safety since 1894, reminds you that defective heating equipment not only deprives a family of needed warmth while raising fuel bills, but could create very real hazards. A faulty heating plant can result in fire or asphyxiation.

The following practices performed on a regular basis should help to keep the heating equipment in good running order:

Replace disposable air filters when dirty with replacements that bear the UL Listing Mark. Wash permanent filters in mild soap and water to help increase furnace efficiency and promote safe operation.

Keep the furnace area clean of combustible materials.

Be sure that warm air outlet registers and air returns are not covered by materials such as rugs, drapes, curtains or the like.

Examine the room thermostat for the correct setting and to be sure it is free of dust.

Clean and inspect the humidifier for optimum operation.

Even though you have kept your unit in top operating condition, UL still recommends that a qualified serviceman perform the following inspections and service at the beginning of each heating season:

Inspect air blower belts, adjust the tension or replace them if worn.

When applicable, depending on the type of equipment, eliminate accumulated scale from the firebox and combustion chamber. Inspect for perforations, cracks or openings in the heat exchanger which may permit products of combustion to leak into the heated air supply.

Inspect flue pipe and connections between appliance and chimney.

Clean the circulating air blower wheel and also the combustion air blower wheel if one is provided on your heating unit.

Check boilers for proper water level. If a low water cut-off is provided, determine that the cut-off is functioning properly.

Determine that all safety controls (limit and primary safety controls) and fuel shut-off valves are in working order.

If the unit contains an adjustable fan switch, the controls should be set to manufacturer's recommendations.

Lubricate all motors according to the manufacturer's instructions.

If you have an oil-fired appliance, the following checks and services are recommended by UL for the oil burner:

Clean and adjust ignition electrodes and replace if they are worn.

Inspect oil pumps, lines and fittings to assure that they are free of oil leaks.

Check the burner flame for the proper pattern. Replace the nozzle if necessary.

UL urges consumers to act early to perform the required inspections and service, before the unit is needed.

NOTICE

The North Las Vegas City Council will conduct a Public Hearing on January 17, 1979 (Wednesday) in the City Hall Council Chambers, 2200 Civic Center Drive, at 7 p.m.

The purpose of this meeting is to hear citizens' proposals for programs and policy recommendations which may be funded under the Community Development Act of 1977. All residents and property owners of NORTH LAS VEGAS are cordially and urgently invited to attend and participate.
