mothers and babies

LITTLE KNOWN FACTS

Parents need not necessarily worry if their youngster is on the thin side. A healthy child may stay thin despite a large appetite, and if a child has no major problems and has been slender since infancy but gains a reasonable amount of weight every year, she or he is probably meant to be that way.

Many parents, when they weigh all the factors involved. are glad to get such inexpensive, colorful coordinates as these short-sleeved ribbed tops and knitted shorts, all of 100 percent acrylic, from Mothercare, retailing specialists for mothers-to-be, babies and children under five.

There's no real need for parents to weigh their infants every day, and a baby's daily weight will change, depend-ing on factors such as the time of the last meal. A once-a-month weigh-in at the doctor's should be sufficient, and if you do have a baby scale at home, once every week or two is enough.
