story moved. Urge your children to find out "where the action is."

THE SERIAL GAME: Take any familiar story and write a sequel to it. How about the wedding between Cinderella and Prince Charming as seen by the step-sisters?

The possibilities of reading games are as vast as your imagination. None of these guarantees reading speed, comprehension, or vocabulary building. But keeping in touch with your child's reading is a job you can do better than any teacher in a large class. You can do this job while you are peeling potatoes, driving to baseball or ballet practice, or changing your spark plugs.

Reading "blackouts" need not happen to your children. You are the maintenance engineer, and you can help prevent the problem.

Reading is one of the most important skills your child can attain. Without the necessary skills to negotiate the reading process, your child will be hampered in his/her school work, and his education will be severely impaired.
