

1. Stroke Screening/Carotid Artery

Plaque buildup (also known as atherosclerosis) is an abnormal collection of calcium and cholesterol on the artery walls. As you can see in the image at left, plaque builds up along the walls of a diseased artery. This buildup can restrict blood flow to the brain or break off and become lodged in a blood vessel – causing a stroke.

Through ultrasound technology, Life Line Screening can visualize the inside of your carotid arteries. Early detection allows your personal physician to advise you on an appropriate course of action that could be life saving.

2. Abdominal Aortic Aneurysm (AAA) Screening

An Abdominal Aortic Aneurysm (AAA) is a “ballooning” of the wall in the abdominal aorta. Like strokes, AAAs are most often caused by atherosclerosis (plaque buildup). The majority of people with AAAs have no symptoms. If an AAA ruptures, the mortality rate is as high as 80 percent, with many not surviving long enough to reach a hospital.

More than 15,000 U.S. residents per year die of AAAs. The good news is that AAAs can be identified in minutes via a painless, non-invasive ultrasound screening.

3. Peripheral Arterial Disease (PAD) Screening

Ultrasound technology is also used to screen for Peripheral Arterial Disease (plaque buildup in the arms/legs). Eight to twelve million Americans suffer from PAD.

It is **4-5 times** more likely that you will die from **heart disease** if you have **peripheral arterial disease**.

**Complete Vascular Package
(All 3 screenings) \$109! Save \$26!**

Call 1-800-710-1913 Now! Pre-registration is required.

If you pay by phone, we accept these credit cards. We do not accept credit cards at the event.

Insurance Note: At the present time, Medicare does not cover the cost of these screening services. Life Line Screening does not file insurance claims.
